WTS Cost Example 1

Consider a prototype system with the following characteristics:

- 1. coagulant dosage of 40 mg/L
- 2. flowrate 600 mL/min
- 3. run time of 45 minutes
- 4. 2 inches of anthracite and 6 inches of filter sand
- 5. replace filter material once every five years
- 6. 2 prototype sedimentation tanks

Compute the total yearly cost of this system

Coagulant and Flocculation Cost

$$wt_{c} \begin{bmatrix} kg \\ gal \end{bmatrix} = coagulant \ dosage \begin{pmatrix} mg \\ liter \end{pmatrix} \begin{pmatrix} 3.785 \ liters \\ gallon \end{pmatrix} \begin{pmatrix} kg \\ 10^{6} \ mg \end{pmatrix}$$

$$NCF = \left[\frac{required \ daily \ volume(gpd)}{5 \times 10^{6} (gpd)}\right] \times SF$$

$$Cost_{CF} = NCF\left(\frac{\$25,000}{year}\right) + \left(wt_c \frac{kg}{gal}\right) \left[required \text{ daily volume}(gpd)\right] \left(\frac{365 \text{ days}}{year}\right) \left(\frac{\$1}{kg}\right)$$

Sedimentation Cost

$$t_{p} = \frac{n_{t} (1.56 \text{ gallons})}{\left(\frac{\text{flowrate}}{\text{minute}}\right) \left(\frac{\text{liter}}{1,000 \text{ml}}\right) \left(\frac{\text{gallon}}{3.785 \text{ liter}}\right)}$$

 $\textbf{Q}_{\text{ST}} = \frac{75,000 \text{ gallons}}{t_{\text{P}}}$

 $Q_{SE} = \frac{Q_{ST} \times \text{filter run time}}{60 \text{ minutes}}$

$$NS = \left[\frac{\text{required daily volume(gpd)}}{Q_{SE}(gpm)}\right] \left[\frac{day}{1,440 \text{ min}}\right] \times SF$$

$$\text{Cost}_{\text{s}} = \text{NS}\left(\frac{\$35,000}{\tan k}\right)$$

Filter Cost

$$Q_{F} = \left(\text{flowrate} \frac{\text{ml}}{\text{minute}} \right) \left(\frac{\text{liter}}{1,000\text{ml}} \right) \left(\frac{\text{gallon}}{3.785 \text{ liter}} \right) \left(\frac{1}{0.0668 \text{ ft}^{2}} \right)$$

$$\mathbf{Q}_{\text{FT}} = \mathbf{Q}_{\text{F}} \begin{pmatrix} \text{gpm} \\ \text{ft}^2 \end{pmatrix} \times 1,000 \left(\text{ft}^2 \right)$$

 $Q_{FE} = \frac{Q_{FT}(gpm) \times filter run time}{60 minutes}$

$$NF = \left[\frac{\text{required daily volume(gpd)}}{Q_{FE}(gpm)}\right] \left[\frac{day}{1,440 \text{ min}}\right] \times SF$$

$$Cost_{F} = NF\left(\frac{\$45,000}{filter}\right)$$

Filter Media Cost

$$\operatorname{Cost}_{\mathsf{FM}_{\mathsf{A}}} = \left(\frac{\$9.50}{\mathrm{ft}^3}\right) \left(\frac{\operatorname{thickness(in)}}{12 \operatorname{inches}} \operatorname{ft}\right) (1,000 \operatorname{ft}^2) \left(\frac{\mathsf{NF}}{\# \operatorname{of years}}\right)$$

$$\text{Cost}_{\text{FM}_{\text{S}}} = \left(\frac{\$5.90}{\text{ft}^3}\right) \left(\frac{\text{thickness(in)}}{12 \text{ inches}} \text{ft}\right) (1,000 \text{ ft}^2) \left(\frac{\text{NF}}{\text{\# of years}}\right)$$

Total Cost

Cost _{CF} =	
Cost _S =	
Cost _F =	
Cost _{FMa} =	

Cost_{FMs} =

Total Cost =
