

Problem 3-31: Determine the forces in members GH, HC, and BC.

$$\begin{aligned} \textcircled{1} \sum M_E = 0 &= 3\text{kN}(3\text{m}) + 9\text{kN}(6\text{m}) + 6\text{kN}(9\text{m}) \\ &- A_y(12\text{m}) \\ \underline{A_y = 9.75 \text{kN}} \end{aligned}$$

$$\textcircled{2} \sum F_x = 0 = A_x$$

$$\textcircled{3} \sum M_H = 0 = F_{BC}(3\text{m}) - 9.75\text{kN}(3\text{m})$$

$$\underline{F_{BC} = 9.75 \text{kN}}$$

$$\textcircled{4} \sum M_C = 0 = -\frac{2}{\sqrt{5}} F_{GH}(4.5\text{m}) + 6\text{kN}(3\text{m}) - 9.75\text{kN}(6\text{m})$$

$$\underline{F_{GH} = -10 \text{kN}}$$

$$+\uparrow \sum F_y = 0 = -\frac{1}{\sqrt{2}} F_{CH} + \frac{1}{\sqrt{5}} F_{GH} - 6\text{kN} + 9.75\text{kN}$$

$$\underline{F_{CH} = -1 \text{kN}}$$
