

Example 6b-3: The beam supports a uniform dead load of 300 lb/ft, a uniform live load of 600 lb/ft, and a single live concentrated force of 20 k. Determine (a) the maximum positive moment at C and (b) the maximum positive shear at C.

$$\sum M_A = 0 = -1(10') + B_y(20')$$

$$\underline{B_y = 1/2}$$

$$\sum M_C = 0 = -M_c + 1/2(10')$$

$$\underline{M_c = 5 \text{ ft}}$$

$$M_{c \text{ MAX}} = 20 \text{ k}(5 \text{ ft}) \quad \text{CONCENTRATED FORCE}$$

$$+ 0.3 \text{ k/ft} \left(\frac{1}{2} \right) [10'(-5') + 20'(5')] \quad \text{DEAD UNIFORM LOAD}$$

$$+ 0.6 \text{ k/ft} \left(\frac{1}{2} \right) 20'(5') \quad \text{LIVE UNIFORM LOAD}$$

$$= [100 + 7.5 + 30] \text{ k ft}$$

$$= \underline{\underline{137.5 \text{ k ft}}}$$

Example 6b-3: The beam supports a uniform dead load of 300 lb/ft, a uniform live load of 600 lb/ft, and a single live concentrated force of 20 k. Determine (a) the maximum positive moment at C and (b) the maximum positive shear at C.

$$\begin{aligned}
 V_{C \text{ MAX}}^+ &= 20 \text{ k} \left(\frac{1}{2} \right) \quad \text{CONCENTRATED FORCE} \\
 &+ 0.3 \text{ k/ft} \left(\frac{1}{2} \right) \left[10' \left(\frac{1}{2} \right) + 10' \left(-\frac{1}{2} \right) + 10' \left(\frac{1}{2} \right) \right] \quad \text{DEAD UNIFORM LOAD} \\
 &+ 0.6 \text{ k/ft} \left(\frac{1}{2} \right) \left[10' \left(\frac{1}{2} \right) + 10' \left(\frac{1}{2} \right) \right] \quad \text{LIVE UNIFORM LOAD} \\
 &= [10 + 0.75 + 3] \text{ kN} \\
 &= \underline{\underline{13.75 \text{ kN}}}
 \end{aligned}$$
