

Problem 11b-3 – Determine the moments at B and D. Assume A and C are pinned, and B and D are fixed connected. EI is constant.

$$FEM_{BC} = \frac{3PL}{16} = \frac{3(8k)(20ft)}{16} = -30kft$$

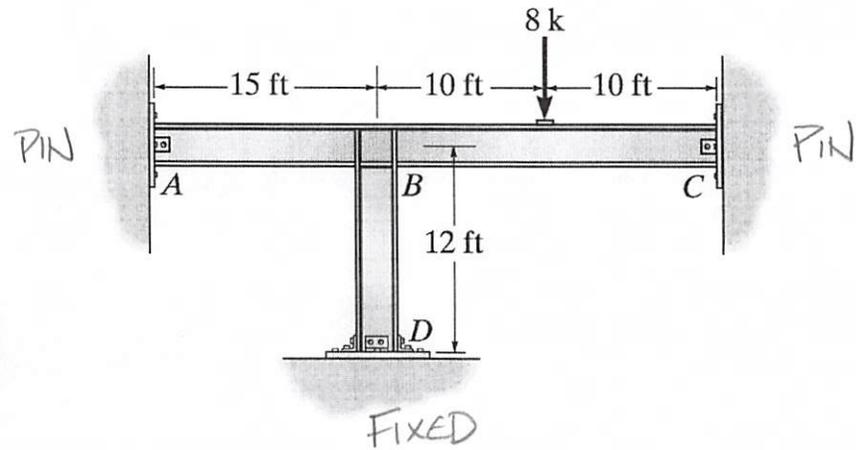

$$K_{BA} = \frac{3EI}{15'} \quad K_{BD} = \frac{4EI}{12'} \quad K_{BC} = \frac{3EI}{20'}$$

$$DF_{BA} = \frac{3/15}{3/15 + 4/12 + 3/20} = 0.2927$$

$$DF_{BD} = \frac{4/12}{3/15 + 4/12 + 3/20} = 0.4878$$

$$DF_{BC} = 0.2195$$

Problem 11b-3 – Determine the moments at *B* and *D*. Assume *A* and *C* are pinned, and *B* and *D* are fixed connected. *EI* is constant.

$$\begin{aligned}
 M_{BA} &= 8.781 \text{ kft} \\
 M_{BC} &= -23.415 \text{ kft} \\
 M_{BD} &= 14.634 \text{ kft} \\
 M_{DB} &= 7.317 \text{ kft}
 \end{aligned}$$
