# Relationships between Median Values and between Aleatory Variabilities for Different Definitions of the Horizontal Component of Motion

by Katrin Beyer and Julian J. Bommer

In Beyer and Bommer (2006), the definition of MaxD in Table 1 (page 1515) was printed incorrectly. The definition should read as follows:

MaxD: At each period the maximum spectral ordinate from all possible orientations of the horizontal axis system is determined. MaxD is hence defined as the 100th percentile of the spectral ordinates obtained.
